# ABOUT ME

- Rising Junior at Alabama School of Cyber Technology and Engineering (ASCTE)
- I’m interested in analytics and careers in the STEM field.
- Data Scholar Intern at Joey James Law in Florence
- Mentored by Urvi Patel
- Plan to attend the University of Alabama at Birmingham (UAB)
    - Major: Analytics

# PROJECT OVERVIEW

- Migrated case data for 20 clients from Clio to Bridge, the firm's new case management system.
- Proofread client profiles
- Documented transfers
- Enables Cross-Team Collaboration in Bridge; teams (intake, discovery, attorneys, etc.) can all work off the same up-to-date information.
- Eliminates Double Entry & Reduces Error-Moving everything systematically avoids confusion or data discrepancies between two platforms.
- Reduces the risk of duplicate records, missed deadlines, or misfiled documents.

# LESSONS LEARNED

1. To be extremely detail-oriented when transitioning data between platforms
2. Collaborating with other team members remotely and in person
3. Understanding legal terms (ex., affidavit, matters, plaintiffs) and referring to them as such during work
4. Being timely in recording hours
5. Mass Tort cases take a while....
6. Importance of working with legal cases tied to environmental science
7. Chemical facts about certain toxins that have affected people within the lawsuit

# LOOKING AHEAD

I plan to explore a variety of jobs, internships, and mentorship opportunities across different fields, including data science. In parallel, I will be pursuing a major in analytics at a university within my state. If local opportunities are limited, I'm also open to expanding my search to nearby states such as Georgia to broaden my experience and exposure.

While remote work offers many advantages, I've learned through experience that it isn't the best fit for me personally. I now have a deeper appreciation for the discipline and self-management that remote roles require, and I value the structure and interaction that come with in-person or hybrid environments.
